1. The Finnmechaniikai Vállalat precision mechanics plant in Budapest¹ manufactures most of the component parts for the machinery it produces itself, but very special parts are made by the Budaix Radiotechnikai Vállalat (condensers) and the Gomm Optikai Művek (small wheels for milling machines). The parts manufactured by these two enterprises usually were not delivered in time, causing delays in assembling the machines. However, all three enterprises were under the supervision of the military and consequently the delays were always quickly overcome.
2. The Finnmechaniikai Vállalat had modern machines which had been manufactured in Hungary and East Germany.
3. It is believed that the Hungarian-manufactured radar equipment is better than the Russian. The Hungarian sets were better technically and various improvements over the Soviet prototypes had been made. Furthermore, each radar set manufactured by the enterprise was subjected to testing by the military, who tested each part carefully, so that it was impossible for a defective radar set to be put into operation.

1.

(two sheets), one showing the general layout of the various buildings of the Finnmechaniikai Vállalat and the other two the internal arrangement of the second and third floors respectively of the assembly workshop building. Explanatory notes on the sketches are in German.
